Features Implemented:

1. **Login & User Session Handling**:
   - Only registered users can log in. User data (including roles like staff, volunteer) can be pre-loaded.
   - Passwords are securely hashed (SHA-256 with salt).
   - After successful login, users are redirected to the main page and session data is stored. If login fails, no session is created.
2. **Find Single Item**:
   - Users enter an itemID to retrieve locations of all pieces of that item.
3. **Find Order Items**:
   - Users enter an orderID to get a list of items in that order, along with locations of their pieces.
4. **Accept Donation**:
   - Staff check: Ensure user is a staff member.
   - Donor validation: Ensure the donor is registered.
   - Record donation data, including item details and storage locations.
5. **Start an Order**:
   - Staff checks: Ensure user is staff.
   - Prompt for client username and validate.
   - Generate and store an orderID in a session.
6. **Add to Current Order**:
   - Choose categories and view available items not yet ordered.
   - Select items, add them to the order, and mark them as ordered.
8. **User's Tasks**:
   - Show all orders the logged-in user is associated with, along with relevant details.
9. **Rank System**:
   - Option b: Track the most popular category/subcategory based on order count.
10. **Update Enabled**:
    - Allow users (delivery agents or supervisors) to update order status.
11. **Year-End Report**:
    - Compile data like the number of clients served, items donated per category, and summary data on client assistance.
